## CARGO-FORCE®

### —Poly Strap

**Poly strap** is made of **polypropylene (PP)**. It is produced through several procedures, including being extruded first and sudden cooled in cold water, then heated in boiling water, stretched vertically under three traction rollers, and finally patternized on surface by last rolling. It is convenient to use and widely applied in various fields, with the advantages of flexibility, low density and good shock resistance.

#### Product Features:

- \* Suitable for both strapping machines (semi-automatic, automatic) and hand tools.
- \* Good adhesiveness, high tensile strength, light weight, anti-corrosive, nice appearance
- \* Conform to GB12023-89 standard
- \* A wide range of color selection, yellow, white, black and more.
- \* Available in customized print, such as lettering, patterning for special purpose (for example, anti-counterfeit).

#### Application:

**Hand Poly strap** suits hand strapping tools (strap sealer, strap tensioner, strapping cart), which is used in different types of packaging especially for the goods in big size and dimensions.

**Machine Poly strap** suits semi-automatic or automatic packaging machines, which is mainly used in small and medium size or weight in big quantity.

**Machine Poly Strap**

**Hand Poly strap**

#### Purchase selection

Error 1: only see the unit price per roll, ignore the quality and weight.

Error 2: only see the weight per roll, without calculation in length.

Error 3: ignore the quality, not realized that strapping packaging itself is a part of the product image

Error 4: not realized that good after sales service can also help to save your cost.

#### The importance of strap quality:

In warehouse, port, the small, medium sized products are always lifted up and down by the workers on the strap. For that reason, you shall select strap in reliable quality to sustain both the load and the tough handling, to prevent damage from breakage of bad straps. So strap quality shall never be your ignorance, otherwise it will bring you big loss!

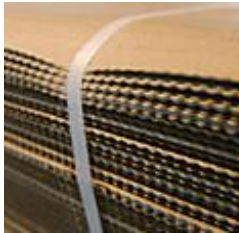

#### Cost calculation:

$(\text{gross weight} - \text{core weight}) \div \text{weight per meter} = \text{length per roll}$

$\text{unit price per roll} \div \text{length per roll} = \text{cost (per meter)}$
