CARGO-LIFT

—Vertical Plate Lifting Clamp

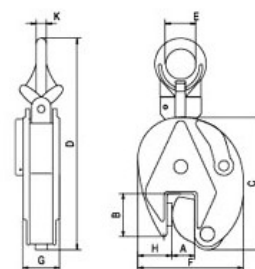

Vertical Plate Lifting Clamp is used in single or one pair for vertical lifting of steel plate. The max lifting weight of single clamp is called rated capacity. It can only lift one piece of plate each time. Multi-Plates lifting is prohibited. Collision shall be avoided during lifting. When lifting, the locking handle must be turned upward to make the spring tense. When unloading, it should be turned downward. The clamp and plate can be separated only after spring loosening.

Product Features

- * Suitable for the lifting, 180° turning and vertical transfer of steel plates and constructions.
- * Fitted with a locking device.
- * Fitted with a hinged hoisting eye movable in all directions, enable the user to place and lift the load from any direction.
- * Fitted with special hook device, easy installation in horizontal position.
- * New design of clamp, with great technical improvement comparing with the traditional version.
- * New model clamp with a wider jaw caliber, lifting plates in various thickness.
- * Conforms to Europe CE Safety Standard.
